

CSE302: Database Systems (Section No.) [Semester Year]

Project Report

Project/Application Title

Project URL/Link

Submitted by:

Student ID	Student Name	Contribution Percentage

The difference between maximum and minimum contribution among the students must be at least 10%. Otherwise, penalty will be given to every member of the team. Remove this line when you prepare the report.

1. Project Description

What to do:

- Briefly explain what your project is about.
- Mention the real-world scenario or system you are simulating (e.g., Event Management System).
- Describe the main purpose and the kind of data the system will handle.

2. Key Features

What to do:

- List the main functions your system will perform.
- Use simple bullet points to highlight what users can do (e.g., create events, register attendees).

3. Database Design

3.1 E-R Model

What to do:

- Draw the Entity-Relationship diagram showing entities, attributes, and relationships.
- Label keys and relationship types (one-to-many, many-to-many, etc.).
- Insert the diagram image in your report.

3.2 Relational Data Model

What to do:

- Convert the ER diagram into tables with attributes.
- Show primary keys and foreign keys.
- Present a schema diagram or list tables with column details.

4. Tools & Technologies Used

What to do:

- List the software and tools you used (DBMS, diagram tools, editors, OS).
- Mention any programming or query languages involved.

5. Role Assignment

What to do:

- Define different user roles in your system (e.g., Admin, User).
- Briefly explain what each role can do or access within the system.

6. GUI Screenshot

What to do:

- Include screenshots of your user interface.
- Add captions explaining what each screenshot shows.

7. Conclusion

What to do:

- Summarize what you learned from the project.
- Mention any challenges you faced.
- Suggest possible improvements or future work.

8. References

What to do:

- List any books, websites, or resources you referred to while doing the project.

Instructions for Students

- Your project should be based on **East West University's context**.

- For each figure or diagram included in the report, refer to it clearly in the text using proper citation (e.g., “As shown in Figure 1...”).
- The report must be checked for plagiarism using **Turnitin** or your institution’s plagiarism checker.
- The final report should be **at least 10 pages long**.
- The project must include a simple **Graphical User Interface (GUI)** and support all **CRUD operations** (Create, Read, Update, Delete).
- Upload your complete code and a simple project description to **GitHub**. Include the public repository link in a dedicated **Project URL/Link** section of your report.
- Your system must implement **at least two different user roles** with clearly defined responsibilities (e.g., Admin and User).
