

ISOMETRIC VIEW

Course Code: CSE200

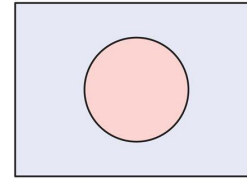

Isometric Projection

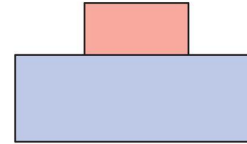

Isometric projection is a method of visually representing a 3D object in 2D where all three axes (length, width, and height) are drawn at equal angles of 120° , and the scale is the same along each axis.

Unlike isometric projection, **orthographic projection** represents objects in separate 2D views, such as front, top, and side, with axes at 90° angles. Isometric is better for visualizing the overall 3D form, while orthographic is more precise for technical measurements and engineering drawings.

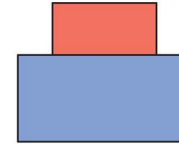

Orthographic and isometric projections of an object
